UNIPRO 40

IGEBA UNIPRO 40

the most flexible ULV Aerosol Generator for versatile applications in plant protection, pest control and hygiene management.

High-performance (cold) fog generator covering both the ULV and LV droplet spectrum. Individually adjustable output quantity between 1 - 73 l/h. Powerful solution pump to feed from any container.

- High area efficacy
- ULV and LV fogging and misting
- Adjustable aerosol nozzles
- 100% compatible for microorganisms
- Ideal for insecticides, fungicides
- Perfect for disinfection
- High penetration depht of up to 120 m*
- Time saving and cost reduction
- High user protection

Applies all liquid formulations including solutions from wettable powders and wettable granules. UNIPRO 40 is perfectly fit for fungizides and systemic agents due to maximal output quantity, it creates efficient LV droplet properties. Applies also effective microorganisms (EMs). Easy operation, including interface for optional automatic operation mode, either by our original timer system or from any external source. Compact design in its class. It fits though a standard door and is easy to manoeuver.

Stainless steel chassies for value preservation combined with low or maintenance-free main components such as powerful direct driven blower and energy-efficient 3-phase frequency regulated motor at 16 Ampere (A) rated current only. Covers 360 to 500 V at 50/60Hz. Low current consumption of only 12 A (at 400 V) in operation .

Illuminated Control Panel

Coloured visualisation of status

Green: ready for use

Yellow: ready for automatic mode

Blue: fogging

Available upgrade options:

- 100 l HD-PE solution tank sufficient for up to 2 ha (20.000 m²)
- Oscillating and timer controlled agitator for the Igeba 100 I solution tank for a perfect mixture
- Telescopic mast retrofitting to transform the unit into a UNIPRO 40-T lifting up the aerosol spray heads up to 4,3 m height.

Solution system with hose pump feeding directly from any external container

Wheel Options:

Pneumatic tires for uneven grounds

Solid casters for even grounds

Optional oscilating agitator including solution feeding line

UNIPRO 40

Electric motor:			
Drive motor	8,3 kW		
Power supply	3-phase 360 - 500 V AC		
Power consumption	12 A at 400 V		
Supply frequency	50 / 60 Hz		
Fuse protection, (delay action)	16 A		
Blower	Side channel blower with frequency converter		
System for active solution:			
Working pressure	0,28 bar		
Output	Freely adjustable 0 - 73 l/h		
	up to 42 I/h in ULV mode		
	Max. 73 I/h for LV mode		
Droplet spectrum VMD	< 20 microns		
determined with water only			
at 42 l/h output rate			
Solution system	Hose pump with suction hose (3 m)		
	Suction filter		
Solution line	Teflon, Viton, stainless steel, PVC		
Number of spray nozzles	4 spray nozzles individually 360° adjustable		
Fogging range	up to 120 m *		
Control	Manually or automatically		
	Automatic operation with optional acessories		
	(timer, remote control) or external port		
Chassis:			
Frame	Stainless steel with removable drawbar		
	Towing coupling for vehicles and trolley		
Wheels	4 pneumatic tires optinally solid castors		
	2 swivel wheels (one with brake) and 2 fixed		
Dimensions L x W x H in cm	145 x 76 x 125 with solid casters		
	145 x 76 x 131 with pneumatic tires		
Weight (empty in kg.)	130		
Optional:			
Solution tank	100 l HD-PE Solution tank		
	Trolley for 100 I solution tank		
Agitator and Timer Set	Agitator for solution		
	programmable timers for preselection of		
	fogging and mixing time		
	Timer module includes smart phone app for		
	easy time set and control		

Nozzle output	Liquid	´D (v, 0,5) VMD	´D (v, 0,9)
10 l/h through one nozzle	water	11,8 μm	27,9 μm

Droplet size data for IGEBA aerosol generators:

Ambient temperature: 21,4 °C Formulation temperature: 22,0 °C

Droplet Size: (enlarged views)

40 microns

20 microns

One 40 microns droplet will give 8 droplets of 20 micron which will increase fog density, distribution and therefore, efficiency.

Example:

1 ml liquid applied

with 20 microns droplet size = approx. 239 Mio. droplets produced with 40 microns droplet size = approx. 30 Mio. droplets produced with 100 microns droplet size = approx. 2 Mio. droplets produced

IGEBA ULV Aerosol Generator operate in a special method, whereby the atomizer nozzles are designed in a 2-step-system. Through the special aerosol nozzle the concentrated droplet stream is leaving the nozzle without touching its inner surface. This principle allows even to apply wettable powders and prevents clogging of the nozzle.

UNIPRO 40 Solution System:

An integrated hose pump with special pulsation damper feeds the activ solution continousely to the spray nozzles. The output can be easily adjusted. UNIPRO 40 performs ULV mode with up to 42 l/h (recommended) and LV mode with up to 73 l/h.

 * under optimal conditions and dependent of the output quantity, tightness of room space

Time Control APP for your smartphone

Easy switch time programming with your smartphone. Connects with bluetooth to the unit. Included with optional time control set for UNIPRO 40 Series. (For IOS and Android)

Example configuration:

UNIPRO 40 basic unit:

with optionals:

- 100 L HD-PE Solution tank
- Agitator for mixable solutions
- Timer controller for mixing and fogging incl. free smartphone programming app
- Pneumatic wheels
